

MonoBehaviour

```
classDiagram
    class MonoBehaviour
    class DifficultySelector {
        MainMenu mainMenu
        Button easyButton
        Button mediumButton
        Button hardButton
        Button infiniteButton
        Button backButton
        Start() void
        OnDestroy() void
        SetButtons() void
        ClearButtons() void
        StartGame(Dificulty Mode difficulty) void
        BackToMainMenu() void
    }
    MonoBehaviour <|-- DifficultySelector
```

The diagram illustrates a class hierarchy. At the top is the 'MonoBehaviour' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it is the 'DifficultySelector' class, represented by a larger rectangle with a grey header and two main sections. The header contains the class name. The first section lists attributes: 'MainMenu mainMenu', 'Button easyButton', 'Button mediumButton', 'Button hardButton', 'Button infiniteButton', and 'Button backButton'. The second section lists methods: 'void Start()', 'void OnDestroy()', 'void SetButtons()', 'void ClearButtons()', 'void StartGame(Dificulty Mode difficulty)', and 'void BackToMainMenu()'. A blue arrow with an open triangle head points from the 'DifficultySelector' class up to the 'MonoBehaviour' class, indicating inheritance.

DifficultySelector

- MainMenu mainMenu
- Button easyButton
- Button mediumButton
- Button hardButton
- Button infiniteButton
- Button backButton
- void Start()
- void OnDestroy()
- void SetButtons()
- void ClearButtons()
- void StartGame(Dificulty Mode difficulty)
- void BackToMainMenu()
